OBJECTIVE

A motivated final-year Electronics and Telecommunications student with a strong passion for web development and a keen interest in leveraging technology to create impactful user experiences, seeking a Full-Stack Web Developer internship. I am eager to apply my analytical mindset, foundational programming skills, and proactive learning approach to contribute enthusiastically to challenging real-world projects, while rapidly expanding my practical expertise in modern web technologies and best practices within a dynamic team environment.

EDUCATION

University of Science, VNU-HCM 2022 – Now
Bachelor of Engineering in Electronics and Telecommunications (Expected Graduation: 2026)
Current GPA: 3.57/4.0
Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Object-Oriented Programming, Computer Networks.

SKILLS

Programming Languages	Python, JAVA, JavaScript, C/C++
Frontend	HTML, CSS, SCSS, ReactJS, Responsive Web Design
Backend	Django, Spring Boot, FastAPI, RESTful API Development
Databases	SQL (MySQL, PostgreSQL); NoSQL (MongoDB, Cassandra)
Caching/Search/Vector DB	Redis, Elasticsearch, Milvus, Faiss, Meilisearch
DevOps & Tools	Linux (Basic), Docker, Docker Compose, Nginx, Microsoft Azure (Basic), Google Cloud, Git, GitHub
Languages	Vietnamese (Native), English (TOEIC 650), VSTEP(B2)
Soft Skills	Problem-Solving, Quick Learner, Team Collaboration, Communication, Time Management, Adaptability, Attention to Detail

PROJECTS

E-commerce Fashion Platform *Feb 2025 – May 2025*

Developed a full-stack web platform mimicking a modern online fashion store, with seamless user experience from account registration to order management.

Features: User authentication (JWT) and registration with OTP email verification, product browsing and searching, product detail viewing, shopping cart management, order placement and tracking.

Technologies: Backend (Django), Frontend (ReactJS), Database (MySQL), Caching (Redis), Deployment (Docker, Docker Compose, Nginx, Microsoft Azure).

GitHub Repo: github.com/trandiepp2105/viberstore

ViberChill – Video Streaming Platform *April 2026 – May 2026*

Developed a full-stack movie streaming platform with a modern UI, HLS-based playback, and scalable search capabilities for browsing large movie catalogs.

Features: Real-time search suggestions, advanced filtering, paginated movie listings, detailed movie and episode pages, OTP email authentication, comment and favorite management, and responsive loading skeletons.

Technologies: Django REST Framework, ReactJS, MySQL, Redis, Meilisearch, Docker Compose, Nginx.

GitHub Repo: github.com/trandiepp2105/viberchill

Lucifer-TRACE *Jul 2025 – Oct 2025*

Contributed to 'Lucifer-TRACE', a video event retrieval system for the Ho Chi Minh City AI Challenge 2025, achieving a top-ranking score of 86/88.

Co-authored the scientific paper "Lucifer-TRACE: Dynamic Programming and LVLM-Aided Verification for Event-Based Video Retrieval" detailing the system's architecture.

Features: A multi-modal video event retrieval system utilizing CLIP and SigLIP models. Supports diverse query types including free-text, image, Scene Text (STR), and Spoken Content (ASR). Implements 'Soft Temporal Search' (Dynamic Programming) and 'Early Semantic Verification' (LVLM). Integrates HLS video streaming and Server-Sent Events (SSE) for the web interface.

Technologies: Backend (Django), Frontend (ReactJS), Databases (MySQL), Text Search (Meilisearch), Vector Search (Faiss), Deployment (Docker, Docker Compose, Nginx).

HONORS & AWARDS

Encouragement Prize – AI Challenge 2024 **Oct 2024**

Contributed to the development of an advanced video retrieval system. The system was designed to accurately and efficiently locate specific events within video content based on diverse query types including text, images, and audio. Leveraged advanced deep learning models and robust vector databases (e.g., Milvus) to significantly accelerate the querying process while maintaining high precision in identifying relevant video segments.
